

MiniMundo

REQUEST FOR PROPOSAL

A miniature city, built at children's scale.

Design, manufacturing and installation of an immersive indoor play park.

LOCATION

Aubagne, France

SURFACE

1,100 m²

OPENING

December 2026

01 · THE PROJECT

Four facts to build around.

Everything in this document follows from these four points.

LOCATION

Aubagne, France

Shared building with Prison Island and Decathlon.
Access and delivery logistics to be confirmed.

SURFACE

1,100 m²

Operating surface. Technical and reception areas are not included.

OPENING

December 2026

Manufacturing, shipping and on-site installation must all fit inside this date.

REGULATIONS

French ERP + PV

Compliance with French ERP law and PV is mandatory.
An architect on our side leads the approvals.

02 • THE CONCEPT

Not a playground. A city.

Small streets. Themed buildings. A shopfront on every façade. Children walk through freely and discover trades, shops and everyday life. **Our positioning is premium.**

A visitor must feel they are walking down **a real street**, not past a row of separate boxes.

A

Streets, not modules

Façades and interiors are the experience. The architecture must be realistic and rich in detail.

B

Four kinds of play

Roleplay. Interactive and educational games. Physical soft-play built into the buildings. Free play with no fixed route.

C

Detail everywhere

Shopfronts, signage, mouldings, shutters, planters, lighting, street furniture, greenery. Colourful, playful, warm.

D

Not a copy

We do not want an existing concept repeated. We want a freer, more open experience.

03 • THE SITE

The floor is open. You design the layout.

The red dashed line is the MiniMundo perimeter. Reception, bar, birthday boxes, changing room, restrooms, shop and storage are fixed. **Where each themed space goes is yours to propose.** A high-resolution CAD file will be provided.

MAXIMUM INSTALLATION HEIGHT

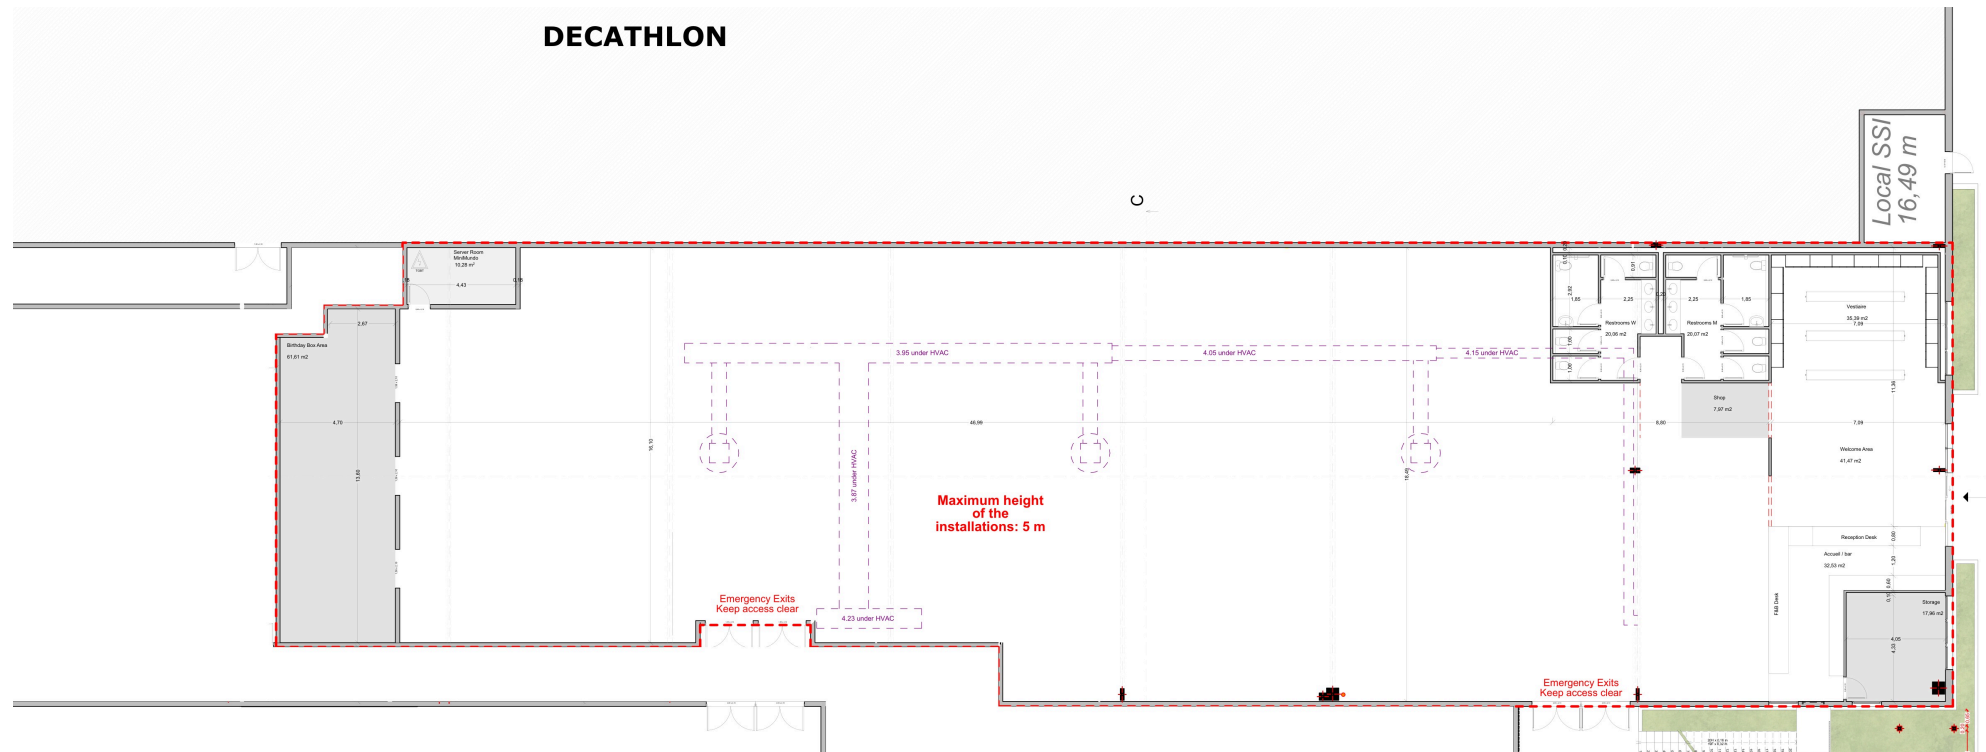

5 m

CLEAR HEIGHT UNDER HVAC

3.87 to 4.23 m

EMERGENCY EXITS

Access must stay clear

04 • QUALITY LEVEL

What these images mean.

The images on the next two pages are **not the design we want**. They show the **level of detail** we want. Do not copy them. They are style references, not photos of existing builds. Bring us your own design, at this level of detail or better.

Three things decide how we judge your work: **the detail of the façades, the quality of the toys and props, and how many different ways a child can play.**

01

Façade detail

Shopfronts, illuminated signage, mouldings, shutters, planters. **Our first priority.**

02

Toys and props

Everything a child picks up: counters, tools, costumes, equipment. **Judged as closely as the buildings.**

03

Many ways to play

One space should offer several things to do. A child who comes back should find something new.

04

Materials and light

Real, durable textures. Timber, brick, metal or equivalent. **No bare plastic.** Backlit signage per space.

05 · VISUAL REFERENCES

Retail and services.

Look at the level of detail, not the design. Match it or beat it.

Supermarket

Striped awnings, wooden posts, open shopfront onto the shelving

Bakery

Arched signage, pastry display case, visible kitchen

Kitchen

Arches and continuous balconies, full kitchen set at the back

Police

Painted brick, wall lighting, furnished front desk

Fire Station

Red brick, fire truck built into the set, site signage

Hospital

Clear signage, fully furnished care stations

05 • VISUAL REFERENCES

Care, construction and special worlds.

Pet Hospital

Consistent themed world, matching furniture and props

Construction Site

Multi-level timber structure, crane, ball pit built into the set

Little Princess

Curtains, chandeliers and vanity stations, highly finished art direction

These images set the style and the level of detail. They are not a layout to copy. Which themed spaces you propose, and where you place them inside the perimeter, is part of your design work.

06 · TECHNICAL SPECIFICATIONS

Architecture, play and materials.

FAÇADE DETAIL

- Open or semi-open shopfronts. Visitors must **see inside each space**.
- Doors and windows must be **real architectural openings**, not flat cut-outs.
- A different sign for every building, **backlit or illuminated** where possible.
- Mouldings, shutters, planters and street furniture: lampposts, benches, street signs.
- Different materials and textures from one building to the next.

TYPES OF PLAY

- **Roleplay.** Children act out everyday situations.
- **Interactive and educational games.** Things to handle and try.
- **Physical and soft-play** built directly into the buildings and façades.
- **Free play.** No fixed route through the park.
- The whole venue must read as **one street**, with landmark buildings, smaller lanes, and a central square where it makes sense.

MATERIALS & MAINTENANCE

- Any material is accepted: timber, composite, metal or other. It must reach the quality shown in the references.
- Built for **heavy daily use** in a supervised children's venue.
- Easy to clean and maintain every day.
- Finishes must match the quality level of the reference images.
- **Name the exact material used for every module.**

06 · TECHNICAL SPECIFICATIONS

Safety, regulations and certification.

CHILD SAFETY

- Young children will use this park every day. Plan for it **from the first drawing**.
- Play surfaces, walls and edges within a child's reach must be **soft and shock-absorbing**.
- **Rounded corners and edges everywhere.** No sharp parts at child height.
- Non-slip flooring that is easy to disinfect, in every play area.
- All materials non-toxic and compliant with children's safety standards.

FRENCH ERP REGULATIONS

- The venue is a French **ERP** (public venue). The design must work with French rules on **accessibility, fire safety and smoke extraction**.
- Our architect will confirm these constraints with you during the detailed costing phase.
- You are **not expected to master French rules now**. Tell us you can comply.

CERTIFICATION

- Play equipment and furniture must meet the safety standards of the country of installation: **France and the European Union**.
- Send us your product certificates with your answer.
- Confirm in writing that every material used meets current standards.

07 · WHAT WE EXPECT FROM YOU

Seven points. All seven are required.

We are building this together. This is what we need from your side to hold December 2026.

1 Pricing broken down by space

One price per themed space. Never one single global price.

Manufacturing

Shipping to Aubagne

On-site installation

Options

Payment terms

2 Design work on our floor plan

Work directly from the plan we send you. **We want to see your design, not read about it.**

3D render per zone

Scaled 2D layout plan

Materials / mood board

3 Furnishing detail, space by space

For every themed module, list the furniture, equipment and props, and the material of each one. **"Supermarket included" is not enough.**

4 Your delivered projects

Photos and, if possible, videos of **real finished sites**, not only 3D renders. List similar projects you have delivered, with surface area and country.

07 · WHAT WE EXPECT FROM YOU

And three more.

5

Certifications and compliance

Product certificates for children's play equipment (**European Union and France**), plus written confirmation that every material used meets current standards.

6

Lead times you can hold

Manufacturing time, shipping time to Aubagne, and installation time on site. **Each one dated against a December 2026 opening.**

7

Commercial terms and after-sales

Payment terms, warranty length and conditions, and how after-sales works in practice: **spare parts, and how fast you act when something breaks or wears out.**

08 · WORKING TOGETHER

We want a partner who moves fast.

Speed of response matters more to us than anything else on this list.

Fast answers. One clear contact person. Short turnaround on questions and revisions. That is what will keep December 2026 reachable.

We are available whenever you need us: detailed site plans, questions on the space programme, or any technical point.
